With infrared technology

InfraWeeder Lady

The LADY model is ideal for private gardens and is particularly suitable for destroying single weeds. The size of the burners allows optimum use on flower beds, between and under bushes, as well as between rows of vegetables and in greenhouses. Thanks to its extremely light weight it is easy to use on dry walls, between steps on stone staircases or on steep slopes. Garden flags, gravel paths, drives and flat roofs are just some of the other areas in which it can be used.

The infrared technique of InfraWeeder destroys weeds fast and chemical free. The intensive infrared heat is applied directly to weeds and seeds, destroying protein cells and starting the withering process immediately.

Article No.	Description
IW Lady	incl. gas cartridge (one way), lighter
IW Butan 330E	Spare gas cartridge (one way), 330gr.
IW Butan 330K	Box with 12 cartridge
